## ***Reviews***

*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.*

Not illustrated. 1903 Excerpt: . retains all the droppings on the surface, but, by retarding the percolation in times of frequent rains, it soon causes a coating of filth. The best situation is a slightly raised elevation, with the ground sloping gently from the building, to ensure good surface draining in times of rain or during a thaw, after a severe frost. To get as much sunshine as possible, it should have a south aspect, with a point or two of east. Sunshine is recognised by good poultry keepers as valuable, especially in the winter. It imparts vigour to the birds and stimulates egg production. The yard must be on the south side of the house so that the fowls may get a certain protection from the north-east winds, and receive the benefit of the first dry ground in the early spring. Where damp and snow are abundant, the ground on the south side of the building will be found to be dry many days before that on the north side. Permanent foul houses are not to be recommended for farms, but where they are unavoidable, they should be built on a foundation of brick, stone, or concrete. The foundation should extend into the ground below the frost line. The house should be vermin proof, and be so constructed as to exclude the draught. Grain should not be kept in the fowl house. It attracts vermin. Let the corn bin be some distance away. (N.B. A burnt out petroleum cask...
