Book Condition: New. Publisher/Verlag: Springer, Berlin | Volume 3 | The Guide to Fluorescence Literature is designed to free investigators and analysts of the tedious task of literature searching. It is disturbing to learn that duplication of research is still quite common. Martyn has reported that 31 percent of all researchers would have acted differently had they known all that was known about the subject matter of their projects when they started them [New Scientist 21(377):338(1964)]. There are also reports indicating that the literature explosion has increased the gap between published reports and broad knowledge of their existence. It seems logical to assume that at least one-quarter of each research budget is wasted today because of duplicated effort. An exhaustive literature search should therefore be a prerequisite for any new research project. The Guide is intended to facilitate this task. The Guide is also intended to save valuable time and by calling attention to articles in journals not available in the researcher's library and by indicating who else is working in the field and what they are doing. The Guide will assist in documenting papers and in pinpointing new concepts. Readers' comments on the first two volumes have been rewarding and also an inspiration to improve the Guide further. Volume 3 contains a number of innovations that refine its organization and thus increase its usefulness. The most noticeable improvement is the subgrouping of related papers into narrower categories. | 1. Chemical and Biochemical Analysis.- 2. Fluorescence Probes.- 3. Foods, Feed, Additives, and Pesticides.- 4. Chlorophyll and Photosynthesis.- 5. Organic Analysis.- 6. Inorganic Analysis.- 7. Techniques, Books, and Reviews.- 8. Apparatus and Standards.- 9. Theory - Internal Energy Processes.- 10. Theory - External Energy Processes.- 11. Fluorescence Lifetimes and Polarization.- 12. Phosphorescence, Spin-Rotation Effect.- 13. Chemiluminescence, Bioluminescence, and Dosimetry.- 14. Atomic Fluorescence.-...
